RISK AND REWARD PROFILE

Potentially lower reward ← Potentially higher reward
Lower risk Higher risk

1	2	3	4	5	6	7
---	---	---	---	---	---	---

- this indicator is based on historical data and may not be a reliable indication of the future risk profile of the Fund.
- the risk category shown is not guaranteed to remain unchanged and may shift over time.
- the risk and reward indicator table demonstrates where a Fund ranks in terms of its potential risk and return. The higher the rank the greater the potential reward but the greater the risk of losing money. The lowest category does not mean 'risk free'.
- the Fund appears as a "4" on the scale. This is because the Fund invests in assets that typically carry medium risk and offer medium rewards compared with other categories of assets.

The indicator does not take account of the following risks of investing in the Fund:

- the value of investments and the income derived from them may fall as well as rise and you may not get back the original amount invested. Over time, inflation may erode the value of investments.
- there will be a variation in performance between funds with similar objectives due to the different assets selected.
- there is a risk that the third parties that the Fund enters into investment contracts with will fail to meet their obligations and the Fund may suffer a loss.
- changes in exchange rates may mean the value of your investment goes up and down.
- there is a risk that a bank or building society could face financial problems, leading to the loss of some or all of the money on deposit.
- changes in market conditions may mean that it is not easy to buy or sell investments at a desired time and price.

For full details of the Fund's risks please see Section 5 of the Fund's prospectus.
